

At IndigoClear

## We're transforming acne treatment with breakthrough science.

Using our expertise in bacterial DNA repair, we've developed a unique blend of natural compounds that work alongside a specialised light mask to target acne-causing bacteria. Our approach offers a safe, effective alternative to traditional treatments—without the unwanted side effects.

### We Are Aiming

To produce a product that is formulated from botanicals rich in the compounds that we have found to be active.

### The Topical Application

## Will Be Harmless

Without light-activation, therefore we intend to combine this with light-masks, which alone lead to only mild improvements over their longer term use, but with our product will show effective clearance of skin bacteria rapidly.

### Side Effects

## From Common Drugs Such As

01

Co-cyprindiol include increased susceptibility to breast cancer.

02

For isotretinoin can cause birth defects.

03

Topical antibiotics can lead to skin sensitivity to sunlight.

04

Bacterial resistance.

Our product aims to reduce acne causing bacteria without leading to such side effects.
